COPYRIGHT AND RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials. The various state privacy acts govern the use of materials that document private individuals, groups, and corporations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a reproduction if the document does not infringe the privacy rights of an individual, group, or corporation. These specified conditions of authorized use include:

- non-commercial and non-profit study, scholarship, or research, or teaching
- criticism, commentary, or news reporting
- as a NPS preservation or security copy
- as a research copy for deposit in another institution

If a user later uses a copy or reproduction for purposes in excess of "fair use," the user may be personally liable for copyright, privacy, or publicity infringement. This institution's permission to obtain a photographic, xerographic, digital, or other copy of a document doesn't indicate permission to publish, exhibit, perform, reproduce, sell, distribute, or prepare derivative works from this document without first obtaining permission from the copyright holder and from any private individual, group, or corporation shown or otherwise recorded.

Permission to publish, exhibit, perform, reproduce, prepare derivative works from, sell, or otherwise distribute the item must be obtained by the user separately in writing from the holder of the original copyright (or if the creator is dead from his/her heirs) as well as from any individual(s), groups, or corporations whose name, image, recorded words, or private information (e.g., employment information) may be reproduced in the source material. The holder of the original copyright isn't necessarily the National Park Service. The National Park Service is not legally liable for copyright, privacy, or publicity infringement when materials are wrongfully used after being provided to researchers for "fair use."

This institution reserves the right to refuse to accept a copying order if fulfillment of the order is judged in violation of copyright or federal or state privacy or publicity law.

SCOPE AND CONTENT

ARCHIVES MAP COLLECTION circa 1890-2005 (bulk dates: 1930-1970)

DESCRIPTION

An assorted collection of maps, drawings, plans, and schematics related to Yellowstone National Park and surrounding areas. Includes materials from Robert Reamer, Orr Pickering Associates, CTA Architects Engineers, and the National Park Service's Branch of Landscape and Design, among others.

The materials cover diverse topics such as original building designs, proposed remodeling, repairs, technical drawings for equipment, and resource management maps.

Detailed descriptions of the materials can be found in this finding aid, but researchers should be advised that for many maps, dates and details are unknown.

ORGANIZATION

The materials in this finding aid are grouped first by the main geographical region they portray (Canyon, Mammoth, etc.), then by the date of the item, followed by title, and finally by drawing number. This will group related materials as closely together as possible.

Where possible, every effort has been made to preserve the title that appears on the map or drawing. Notable exceptions are titles that use the ampersand symbol (&), and in these cases the word "and" was used instead. Other exceptions are the maps showing abbreviations, such as those featuring liquid petroleum installations throughout the park. Many drawings are titled with the abbreviation "LP", and in most cases we have put "liquid petroleum" in parentheses to make title indexing more effective. Please bear this in mind when searching for a specific title.

We also have the inventory available by request in an Excel database, where the researcher can filter the materials by date, geographical region, drawing number, etc.
